84A40/50 Series

Dual-Arm Tolerance Compensation Clamp

Destaco’s new 84A40 and 84A50 dual-arm tolerance compensation clamps are offered in two sizes and have a cam-type mechanism for smooth operation. This design offers customers consistent high clamping force throughout the clamping stroke.

The standard clamp arm motion is 90° for each arm, in a scissors-like action for a total opening of 180°. There is 2° of compensation per clamping arm or 4° total compensation, allowing the clamp to self adjust without the need to use shims.

The enclosed design protects the clamp when used in welding and other rigorous, harsh environment applications, enabling the clamp to last for millions of cycles.

When it comes to holding and positioning workpieces perfectly in place, Destaco has the right clamps to get the job done.

Product Highlights/Options

- Tolerance compensating
- 90° clamp arm motion
- Multiple clamp arm options
- High clamping force, compact size

Features, Markets and Applications

- Tolerance compensation for flexible part thickness handling
- Simultaneous clamping motion for equal clamping from both sides
- Lubricated for life for minimal wear and long life
- High clamping force through the range of clamping motion
- Compact enclosed body for durability in harsh and welding application
- Same standard foot mounting pattern as other Destaco clamping products
- Uses standard Destaco sensor package offering

84A40/50 Tolerance Compensation

Dual Arm Compensation

• 2° of tolerance compensation per clamp arm
• Compensates for variable sheet metal thicknesses
• There is no need for shimming
